1.- Contexto

Esta práctica se ha realizado en el contexto de la asignatura Tipología y ciclo de vida de los datos, con código M12.851, del Máster de Ciencia de Datos de la Universitat Oberta de Catalunya.

En la práctica se solicitaba la elección de una web, para posteriormente identificar los datos relevantes y realizar una extracción de éstos a través de alguna de las diferentes técnicas explicadas en el Bloque 1 de la asignatura, indicando como método preferente el web scraping.

La web escogida ha sido la del Mercado de Metales de Londres, https://www.lme.com, en la cual se refleja de manera diaria las diferentes cotizaciones adquiridas por los metales que procesa.

Se ha revisado que no hay disponibilidad de una API propia libre y gratuita, si es posible adquiriendo una licencia anual de 18.000 (con un retraso de los datos de 30 minutos) o 3.000 dólares (con un retraso en los datos de 1 día).

La información, con un día de retraso, se puede obtener, sin histórico, a través de la página principal para los principales metales, por lo que la realización de un scrap que se programe diariamente y que vaya añadiendo en un dataset la información nos daría la misma información que la licencia de 3.000 dólares de una forma gratuita.

Se ha revisado el fichero robots.txt y no hay limitaciones en el mismo, así como las condiciones legales, que indican que los usuarios registrados no pueden sustraer información de la web, por lo que toda la labor de scrap se realizará en la web sin realizar login de la misma, para no incumplir las condiciones legales.

2.- Definición del Dataset

Valores diarios de los principales metales en el London Metal Exchange.

3.- Descripción del Dataset

Recolección diaria de valores obtenidos en el LME de los siguientes metales:

- Aluminium
- Copper
- Zinc
- Nickel

M2.851 - Tipología y ciclo de vida de los datos - Práctica 1 43287170C - Betancor Sánchez, Manuel - Aula 2 52774328T - Navalón Hernández, María Dolores - Aula 1

- Lead
- Tin
- Aluminium Alloy
- NASAAC
- Cobalt
- Gold
- Silver
- Steel Scrap
- Steel Rebar

4.- Representación gráfica

La gráfica principal se puede obtener desde el fichero, disponible en el repositorio de Github, AnalisisDatasetLME.ipynb.

Para esta representación gráfica, al ver que una representación conjunta de todos los datos tenía como inconveniente la gran diferencia de valor existente en los metales, se ha realizado una normalización de valores para pasarlos a una escala de 0 a 1, de forma que se puede evaluar, de un solo vistazo, la evolución de cada metal.

En el caso de querer tener información con valores económicos se ha añadido también al repositorio de Github la hoja de cálculo Gráfico_dinámico.xlsx, en la cual se ha diseñado un gráfico conectado a un formulario dinámico, donde se puede filtrar por metal, o incluir varios metales, obteniendo diferentes representaciones gráficas.

Como ejemplo vamos a exponer la fluctuación del oro en el periodo analizado, con el gráfico obtenido a través de esta hoja de cálculo.

M2.851 - Tipología y ciclo de vida de los datos - Práctica 1 43287170C - Betancor Sánchez, Manuel - Aula 2 52774328T - Navalón Hernández, María Dolores - Aula 1

5.- Contenido

Los campos que incluye el Dataset son los siguientes:

- Date: Incluye la fecha de la captura.
- Product: Metal a valorar.
- Currency: Moneda por la cual se valora.
- Value: Valor económico en el mercado del producto a fecha.

Como ampliación a la práctica se ha realizado una ampliación del código inicial, recopilando las imágenes correspondientes a las familias de metales (la web no disponía de imágenes para cada metal), por lo que se ha desarrollado un dataset ampliado que incluye además el siguiente campo:

• Type: Valor que indica la familia a la que pertenece, para poder identificar la imágen descargada que le correspondería a dicho valor.

Para este documento se han recogido los datos provenientes de la semanas 43 y 44 de 2019, la cual incluye las valoraciones desde el día 21 de octubre hasta el 1 de noviembre.

El dataset que se incluye en el repositorio de Github tiene recopilados datos desde el 21 de octubre hasta la fecha en la que se entrega la práctica.

La ejecución ha sido diaria, el código va añadiendo al dataset los resultados diarios. Esta ejecución se puede realizar con una tarea programada desde el sistema operativo, para realizar la automatización de la misma.

6.- Agradecimientos

Agradecemos a The London Metal Exchange Private Unlimited Company¹, propietarios de la web, ya que gracias a su servicio hemos podido realizar la práctica.

También a Juan Navalón, que nos explicó de primera mano el uso que hacían de esta información en su empresa de recuperación de metales ligeros y que nos ayudó a entender su utilidad en los negocios que operan en estos mercados.

7.- Inspiración

La bolsa de metales de Londres o *London Metal Exchange* es el mercado especializado en metales más importante del mundo. Los precios que se generan en sus plataformas de negociación son una referencia global y sirven de base para la compraventa física de metales.

Conocer las fluctuaciones e incluso ser capaces de predecirlas puede ser la clave para muchos negocios, cuyos costes de producción dependen directamente de la gestión del aprovisionamiento de estas materias primas. Saber en qué momento comprar o vender permite maximizar los beneficios de las empresas involucradas en esta cadena de suministro. En definitiva, el conocimiento de las fluctuaciones en los precios de los metales sirve para reducir el riesgo a las empresas que participan en el mercado de metales

8.- Licencia

LICENCIA PARA EL DATASET

Hemos elegido la licencia de Creative Commons "CC BY-SA 4.0 License". Esta licencia en concreto combina dos de las 4 limitaciones posibles: la condición de que se cite a los autores de forma expresa y la de que si se usa para crear otra obra, esta se distribuya bajo la misma licencia. Nuestro objetivo al elegir esta licencia es compartir el conocimiento y promover que otros compartan también sus creaciones, pero reconociendo siempre la labor de los autores.

| 1 November 2019 | LME Steel Scrap | US\$ | 257.00 |
| 1 November 2019 | LME Steel Rebar | US\$ | 414.00 |

En una ampliación posterior, donde añadimos el web scraping de imágenes en el código, decidimos ampliar el dataset añadiendo la clasificación del metal.

La elección de esta clasificación es debida a que en la web no disponen de imágenes para cada metal, pero si en el subdomino web www.lme.com/Metals podemos encontrar una imagen de cada familia.

```
M2.851 - Tipología y ciclo de vida de los datos - Práctica 1
43287170C - Betancor Sánchez, Manuel - Aula 2
52774328T - Navalón Hernández, María Dolores - Aula 1
```

Es por lo cual se realizó un nuevo dataset ampliado con la familia, la cual referencia la imagen descargada con el código.

El resultado es el siguiente:

| Date | Product | Currency | Value | Туре |
|-----------------|---------------------|----------|-----------|--------------------|
| 21 October 2019 | LME Aluminium | US\$ | 1,735.50 | Non ferrous metals |
| 21 October 2019 | LME Copper | US\$ | 5,820.00 | Non ferrous metals |
| 21 October 2019 | LME Zinc | US\$ | 2,500.00 | Non ferrous metals |
| 21 October 2019 | LME Nickel | US\$ | 16,200.00 | Non ferrous metals |
| 21 October 2019 | LME Lead | US\$ | 2,202.00 | Non ferrous metals |
| 21 October 2019 | LME Tin | US\$ | 16,825.00 | Non ferrous metals |
| 21 October 2019 | LME Aluminium Alloy | US\$ | 1,310.00 | Non ferrous metals |
| 21 October 2019 | LME NASAAC | US\$ | 1,045.00 | Non ferrous metals |
| 21 October 2019 | LME Cobalt | US\$ | 35,500.00 | Minor metals |
| 21 October 2019 | LME Gold | US\$ | 1,484.50 | Precious metals |
